

The Academy of International BioEnergetic Sciences

**Progressive Clinical ElectroDermal (EAV/EDS)
Screening Skills, Techniques & Protocols**

2010 Course Syllabus

COURSE OVERVIEW

EAV/EDS training has been mostly in the hands of companies who have sold the instrumentation. With very few exceptions, this very basic training has been insufficient for those who are in clinical practice. Several leading EAV practitioners recognized this need and have partnered with the Academy of International BioEnergetic Sciences founded by internationally acclaimed EAV practitioner and Naturopathic Physician, Dr. Robert Cass (Canada) to provide candidates at all levels of proficiency with the necessary tools and skills to achieve a greater level of technical expertise and clinical mastery. Students will enjoy personal attention and ongoing mentoring throughout the year.

Upon completion of these sessions, students will have gained a greater level of assurance, confidence and authority to meet the increasing health challenges with which are being presented.

The EAV Academy sessions for 2010 convene over 4 long weekends throughout the year to allow students time to apply their newly acquired skills. Concise, clinical EAV lectures and presentations are each followed by a lab session to provide students with practical experience relative to the topic. It is highly recommended that students bring their EAV instruments (we can arrange for a limited number of students to share) as this series is mostly hands-on. Extensive notes and protocols accompany each section.

The Academy of International BioEnergetic Sciences have invited a stellar team of presenters bringing with them years of clinical and teaching experience in the Art & Science of BioEnergetic Medicine to provide for our classes. Dr. Robert Cass will be the primary instructor at all of the EAV sessions in Canada. Other expert EAV practitioner/teachers will also be present as subject matter warrants.

The Academy of International BioEnergetic Sciences is an accredited and board certified college. Successful delegates are eligible for continuing education credits and also for certification as a Holistic Healthcare Practitioner, HHP, by the American Association of Drugless Practitioners. Qualified candidates may be eligible for certification with the American Alternative Medical Association. Certification of completion for this 100 hour programme requires students to attend all sessions and complete all case studies.
